Are you doing enough to protect your data?

It's not IF. It's WHEN. Get the data protection you need with NeoCyber™.

With so many cyber security alerts to review and security events to sort through, an organization's IT team can end up with alert fatigue, causing them to ignore a high percentage of the alerts. When that happens, cyber attacks happen – and you don't want your organization to be one of the 41% that reported network downtime of eight hours or more.*

As an information technology leader, you want total security visibility into your network and users, without being bogged down with false positives and log monitoring overload. You need efficiency and peace of mind that your network is protected from malware, ransomware, and other cyber attacks.

Neovera can help you stay ahead of cyber threats. Our Cyber Security Services platform, NeoCyber™, provides enterprise-grade cyber security for organizations that are looking for a no-hassle solution to protect their data.

Our global threat intelligence monitoring system helps us fully understand the threat landscape so that emerging threats and advanced attack methods are identified and thwarted before damage is done.

Bottom line: We protect your business from cyber attacks.

> "One in five small businesses falls victim to hackers every year, and of those, about 60 percent go out of business within six months of the attack." **- U.S. Chamber of Commerce**

WHAT'S INCLUDED?

24x7 Continuous Security Monitoring and/or Management

Detailed Security Reports

Compliance reports for regulations including PCI DSS, GLBA, and more
