IAM CLOUD READINESS ASSESSMENT

SECURELY ENABLING YOUR JOURNEY TO THE CLOUD

Trying to figure out how to balance security, agility, and end user requirements to use more cloud services while controlling cloud identity sprawl? Worried about moving your applications and sensitive data to the cloud while still leveraging your investment in your current identity and access management solution?

What applications are ready to move to the cloud? Do my identity management processes need to change? How do I manage my privileged users for both cloud and non-cloud applications? How do I lower my identity costs while providing more functionality?

We help you understand how to accelerate secure cloud adoption from your enterprise to the cloud and back.

PRIORITIZE IAM RISKS & PROGRAM PLAN

During this 3 week assessment delivered both on-site and remote, we will access your applications, people, processes, work-flows, and current security technology with respect to identity and access management for the hybrid enterprise.

We will help you identify and prioritize key applications to migrate to the cloud, and which processes and work-flows may need to be modified.

We will help you better understand how to utilize security standards for single sign on, federation, privileged access management and others that your organization can use to protect yourself in a hybrid enterprise.

YOUR IAM, YOUR WAY

Customized to your needs, this interactive session is a unique opportunity for business and security leaders to understand their exposure and make informed decisions about identity and access management.

Key Topics //

- » How to manage both end users and privileged users
- » Gain visibility into identities and cloud application usage
- » How to automate user provisioning and other key processes
- » Analytics and Reporting
- » Build an identity and access management hybrid program plan
