

# \$5 BILLION DIGITAL PAYMENT PROCESSOR REDUCES INFRASTRUCTURE COSTS BY 75%

## CHALLENGE

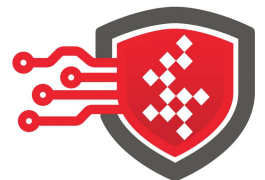

- Increasingly outdated / inflexible application architecture
- Aging IT Infrastructure - expensive to operate and difficult to scale
- Complex data processes and external system users/dependencies
- Difficulty monitoring / diagnosing performance and security issues
- Difficulty retaining talented resources to support legacy systems

## APPROACH: FUTURE STATE ARCHITECTURE & MIGRATION

## SOLUTION OUTCOMES

- Decreased time-to-market for new systems/products
- Full benefits of cloud: horizontal scaling, faster processing of key workloads, etc.
- New capabilities that were previously impractical: rapid provisioning of new servers, automated deployments of systems, etc.
- Highly fault tolerant configuration with near-zero rto/rpo (99.999% planned up-time with min. overhead)
- Multi-million dollar savings per year via lower system admin and infrastructure related costs

Neovera is the leading provider of strategic IT consulting and managed services with 24x7 engineering operations based inside the largest cloud/isp peering-hub in the world.
